RE: FDEP ID: COM 288039, Weekly Update

Jon Iglehart
South District Director, FDEP
2295 Victoria Avenue, Suite 364
Fort Myers, Florida 33901

Dear Mr. Iglehart,

This letter constitutes the weekly update requested by FDEP concerning the removal of the lime residual at the South Street Property.

Groundwater sampling was collected on Monday 3-18-2019. These results will be forwarded as soon as they are received by the City. The next sampling event will be April 15, 2019.

Thank you for meeting with the City on Thursday, April 4, 2019. As we discussed, the city is still dressing the lakes and site for safety and conformity for a proposed recreational park. A recreational park and stormwater management options were discussed by the South Street Future Site Plan Steering Committee at their meeting in March.

The City of Fort Myers will submit the conformity texture testing that verifies the lime residuals have been removed from the site as outlined in the original plan submitted to FDEP August 30, 2018.

Upon the completion of the site dressing the City of Fort Myers will test the top two feet of the site that is above the water table for conformance with the SCTL for a recreational park. As we discussed this SCTL will be provided to the City by FDEP.

Any water body left on the site at the completion of the project will be utilized as a stormwater management area or filled with clean fill to create a larger park area.

A groundwater analysis will be submitted after the results of the April sampling that will analyze the full year's worth of data and determine if the site had any effect on the groundwater quality.

The City of Fort Myers will continue to coordinate with FDEP to facilitate the Removal Plan and monitoring.

If you have any other questions or concerns please contact me at (239) 321-7630.

Thank you,

Richard H Thompson, P.E.
